In October 1902, the reservoir of the first Aswan Dam filled, and Egypt’s relationship with the Nile River forever changed. Flooding villages of historical northern Nubia and filling the irrigation canals that flowed from the river, the perennial Nile not only reshaped agriculture and the environment, but also Egypt’s colonial economy and forms of subjectivity. In *The Lived Nile*, Jennifer L. Derr follows the engineers, capitalists, political authorities, and laborers who built a new Nile River through the 19th and early 20th centuries. The river helped to shape the future of technocratic knowledge, and the bodies of those who inhabited rural communities were transformed through the environmental intimacies of their daily lives. At the root of this investigation lies the notion that the Nile is not a singular entity, but a realm of practice and a set of temporally, spatially, and materially specific relations that structured experiences of colonial economy.
