# 3D Scanning Deep History

In Deep History, a course offered jointly by the History and Anthropology departments, students engage with the world-class collection of Harvard's Peabody Museum, giving them a unique opportunity to approach human history through material remains.

In this Digital Futures Discovery Series presentation, Professors Daniel Lord Smail (History) and Matthew Liebmann (Anthropology) will discuss the role of material culture in the course, and Jeremy Guillette will discuss the process of creating 3D models for the course with a 3D scanner, with a live demonstration.

Monday, April 2
12pm – 1pm
Cabot Library Discovery Bar

All are welcome!
